17.

The motherboard is a main circuit board in a computer that holds and connects all the important components like CPU, RAM, and connectors.

18.

The CPU (Central Processing Unit) is the "brain" of a computer that processes instructions and performs calculations for tasks.

19.

Solid state drives (SSDs) are storage devices that use memory chips to store data, while magnetic platter hard drives use spinning disks and magnetic technology. SSDs are faster and more durable than traditional hard drives.

20.

A heat sink is a component that helps dissipate heat generated by the CPU, keeping it cool and preventing overheating, which can damage the CPU.

21.

RAM (Random Access Memory) is a type of computer memory that stores data temporarily while the computer is on. You can't permanently store files in RAM because it loses its data when the computer is turned off.

22.

A hard drive is a device used for long-term storage of data in a computer. It stores files, programs, and the operating system even when the computer is turned off.
